DATSBOTAI WHITEPAPER

Digitalization, tokenomics, fund management etc, over the last decade the world have experienced a significant amount of development hence shooting the world into extreme modernization

What does the world have now. DatsBotAI, a tech startup company legally licensed*[No: 1184704,* [verify here]*]* in UAE focusing on building a blockchain ecosystem around a proven arbitrage AI Bot as our major utility case through our cutting edge innovative technique towards artificial intelligence and the arbitrage system, and of course introducing a safe zone for crypto enthusiasts. Now the possibility of earning from the comfort of one's home is now ever possible.

Thrilled? Yes something big is coming!!

- TOKENOMICS & FUND ALLOCATION
- UTILITY
- HIGH PERFORMANCE BLOCKCHAIN

-VESTING & LCP

01 INTRODUCTION

A trading platform

3.8%, make that figure your favorite!.. Ever thought about having to earn between 1.6% - 3.8% daily ROI for so long that it turns to a retirement paycheck?
Establishing an AI system that returns a guaranteed 1.6% - 3.8% daily of whatever invested in it to it's investors for as long as they want, including an easy payout in USDT.

OUR NATIVE TOKEN will be launched and it's LP funded, this token will serve as the universally accepted crypto tender on our platform.

Investors can initially earn this token based on an LCP(Liquidity Chest Program. 7.1 of company's project documentation) and also have the ability to either swap this tokens to USDT as soon as possible or stake the token to mine more of itself for the investor.

Over time DatsBotAI plans on fully launching its own blockchain

which will give full integration into web3 allowing developers to build amazing utility on it hence creating more established and stronger community.
02 TOKENOMICS

Distribution

Community members and investors will be able to put their earned token back into the platform for a juicy bonus rewards and can withdraw/swap to USDT anytime of their choice but also long holding investors/members get rewarded more.

40% allocated to the community will have just 30% in actual circulation(LCP) and the remaining 10% will be gradually released over time.

03 UTILITY

Invest to earn ,Trading bot and Stake to earn

INVEST TO EARN:

DatsBotAI is a major utility for both investors, community and the token, there'd be availability of different bot models where users can choose to maximize his or her returns while trusting fully that the priority of the company will remain the investor and keeping its native token healthy.

TRADING BOT: Yes, there will be availability of a trading bot, the bot is coded with a perfect strategy targeted at maximizing investor's capital. An investor can choose to invest and earn from the bot while also having the ability to connect to the bot APIs to maximize overall profits as a VIP user(gaining VIP access can only be done by using our native token), subscription and maintenance can all be done using the native company's token

STAKE TO EARN: Staking never getting better until you try it out. Investors will be happy to know that yes staking of the token brings in bonuses. When the token is staked it earns the investor "E" Energy, when an investor stakes the Firm's token he owns, it trigger more rewards such as "bonuses on funds saved by investors, less fees on daily transaction on the

platform"

04 HIGH PERFORMANCE BLOCKCHAIN

Blockchain an implementation of a daily tolerant replicated state machine. we will create a layer 1 blockchain and smart contract platform that will make digital asset transactions to be perfectly smooth, private, fast and very accessible to everybody

Extreme decentralization with hopes to onboard developers with enabling ability to build a very powerful on chain assets, hence setting our platform to not just be strong but also innovative.

SECURITY:
Security is deemed a very vital element in every organization especially if it's involving asset movement, hence just like we have an extremely secured platform. Our blockchain will provide high security to asset owners and users

While running a successful platform, growth is expected, therefore with goals to launch a successful chain, with the best nodes to be made available, building on the chain will be smooth for every developer team. Best designs made Available for founders to create Dynamic NFT communities that can easily provide real utility and value

FIG: Image description of how blockchain works

From a business perspective, it's helpful to think of blockchain technology as a type of next-generation business process improvement software. Collaborative technology, such as blockchain, promises the ability to improve the business processes that occur between companies, radically lowering the "cost of trust." For this reason, it may offer significantly higher returns for each investment dollar spent than most traditional internal investments.

Financial institutions just like ourself are exploring how we could also use blockchain technology to upend everything.
The world is digitizing, each day with the thought of how to provide essential services to improve day to day activities fast and more reliable.

HOW DOES THIS BLOCKCHAIN WORK?

A blockchain consists of programs called *scripts* that conduct the tasks you usually would in a database: Entering and accessing information and saving and storing it somewhere. blockchain is distributed, which means multiple copies are saved on many machines, and they must all match for it to be valid.

Transaction information are entered it into a block, like a cell in a spreadsheet containing information. Once it is full, the information is run through an encryption algorithm, which creates a hexadecimal number called the *hash*.

PROCESSING TRANSACTIONS ON THE BLOCKCHAIN

Transactions follow a specific process, if you initiate a transaction using your cryptocurrency wallet (the application that provides an interface for the blockchain) it starts a sequence of events.
New hash are generated simultaneously and fast until a valid block hash is found, and asset rewards received. Once a block is closed, a transaction is complete.

With all utility provided, the price of our native token is destined to be of great value and the team focus on longevity, necessary measures will constantly be mapped out to uphold security, sustainability, fast and smooth run of the blockchain once mainnet goes live

HOW DOES OUR BLOCKCHAIN STAND OUT?

With well advanced knowledge on blockchain technology and it's operations and with our advanced development team, our blockchain will be equipped and maintained to:

- Manage more and more activities
- Process transactions in seconds
- Full transparency on all activities performed on each machine
- Low cost on transactions
- Top security to ensure the safety of builders on it

Our blockchain will be an open source platform with an absolutely high scalability
it will use a special *PROOF* to validate each block and organize each transaction on the blockchain
Multiple transaction engine can process many smart contracts in seconds, hence it will reduce all form of congestion on the chain

RUST PROGRAMMING LANGUAGE will be the foundation of the blockchain as it is memory efficient and can easily integrate with other programming languages, so making our chain enable smooth engineering of the entire blockchain

SMART CONTRACT: developers can use several programming languages to develop on our chain, Rust will be the native language YES, the protocol supports more languages

Our blockchain will be built to completely stand out and show stability

05 VESTING & LCP

Immediately 90% of LCP goal is achieved 500 million token supply mint will commence and 150 Million will be available for claims by early investors 48hours prior to when the token goes live on decentralized exchanges

LCP(LiquidityChestProgram)

LCP is a program where early investors will be able to lock their funds on the program and claim the tokens at the value of $0.066 = 1 token. Each token will be claimed at this price with 30% of the community token allocation to be made available on the LCP program and 10% will be distributed as rewards and bonuses to investors in Batches (BATCH A, BATCH B, BATCH C) according to our release clause of three months interval.
NB: Our LCP is hosted on Binance which its growth will be monitored by all users on their respective dashboards.

Why participate in the LCP?

- 60% of total generated revenue from the monthly subscription of users would be distributed amongst LCP participants for life.

How to benefit from the 10% Token Distribution?

- Investing on the platform and allowing it run for atleast 3 months without withdrawals qualifies each investor to earn atleast 4% of the total value they are currently holding as bonus in DatsBotAI native token off the 10% distribution.

o6 CONCLUSION

DatsBotAI aims to create a vibrant and active community of crypto enthusiasts and become a leading player in the blockchain space. Through the various phases of DatsBotAI revolution, opportunities to earn passive income thereby broadening its community experience in the cryptocurrency market while tackling the global financial constraints. The tokenomics and revenue streams aim to generate significant value for the community while being equitable and transparent.

Each early investors will be able to lock only $10,000 max on the LCP
